Sticky 4.7.1 - iOS15 Viewport Improvements

This patch applies to all versions released before **September 20th 2021**

With the release of iOS15, Apple has made some changes to the way your device handles the visible height of the entire screen, affecting all pages that have a **data-card-height="cover"** as the first element (example: page-error-2.html)

However, we're prepared and have been in close contact with the developers of Safari's Webkit engine to make sure this update will be as smooth as possible for you. Please follow the next steps to update your Sticky to the latest version.

JavaScript Updates

This code will apply to **custom.js**

Please open scripts/custom.js and go to line 329 (screenshot**: https://jmp.sh/R7EZzxG**) - once you locate it, please replace the code there with this code:

```
var coverHeight = windowHeight + 'px';
```

SCSS Updates (skip if you're updating SCSS)

This code will apply to **scss/components/** for the **_inputs.scss** files

At the end of **scss/components/_inputs.scss** please add

```
//iOS15 Settings - iOS15 Fixes will come here if needed.
.min-ios15 select{background-color:inherit!important;}
.min-ios15 input[type="date"]{text-align:left!important; text-indent:calc(-100% + 70px) !important;}
```

HTML Updates

This code will apply to some **HTML Files** in the list below

Now, once you've added the JS and CSS, you'll have to update the HTML files that affect you, all pages that have the first element under the header a card that is full screen are most likely affected, to make things easier, below is a list of all pages we've updated.

Updating these pages is simple. Just remove the header-clear class from the page-content div. `<div class="page-content header-clear">` as the CSS and JS will handle the rest for you.

page-construction-1.html
page-maintenance.html
page-content-article-3.html
page-map.html
page-error-1.html
page-error-2.html
page-forgot-2.html
page-cover.html
page-signup-2.html
page-photo-home-3.html
page-photo-cover.html
page-construction-2.html
page-food-home-2.html
page-signin-2.html
splash-landing-1.html

Starting with Sticky 4.8, we've introduced the System Pack. This pack replaces most of the pages above, and fixes every iOS15 issues except for the pages above that are underlined, which still require a manual fix as mentioned in the HTML Updates chapter.

If you're running into any issue with this update please send us a message. We'll glady help out! You can always reach us via the following channels:
